Adam Wilson

Voice Of Democracy

Let's talk about my hope for the future. I do not want the future to be futuristic I want it to be the same and not change. Today people use a lot of electronics to live there life and not using their hands to work or even cook food. All people talk about using computers and that what I do not want. In some ways, the technology could help industrial technology and markets to bring it up and to manage the companies. Many companies depend on the internet for their business to run. We as people could improve the internet by putting money towards research. In the future, technology is not going away so we need to oversee how it is used.

In addition to technology, people still communicate by speaking to one another. We all have opinions on different topics in life. If people did not use their voice and speak their opinion we would not be where we are today. That was how the government and all companies we have today became successful because people spoke their opinion.

Veterans became people that we always need to appreciate and to be proud of what they did to keep freedom and make every person in the United States proud and to be able to thank them for what they did. Now people do not really realize how hard it was to fight because they are always caught up in their lives and don't thank the veterans.

American history is very important. When the twin towers got hit that was the biggest tragedy that ever happened in the United States in my book. The people in that city thought the
world was gonna end after they fell they did not know what to do. The VFW is what helped those buildings come back. They help Veterans on a daily basis and try to help everyone else that needs help.

Schooling is one of the most important things to have in life. Some people did not get the opportunity to do school in their life. Different states have different requirements on what state test they have to take and how many points students need to graduate from High School. Colleges might even make students have a certain amount of points to get their certificate.

In our world, we need balance to be successful. Balance is one of the key factors in the future everything cannot be on electronics people need to be able to use their hands to work. Just to be able to do an everyday routine an cook and do things to your own home. Determination has a very big part of that if you are not determined to do something you will not do it. Different Portions of balance affect a lot of things in this world.

In the future, I want our world to be very well educated so everyone can support their family. I want to have students to have fun while they are in school and to be able to study what they want more often. Families in the eras before me did not take schooling very seriously and that why we see homeless people and people that just do not care about life.

In the future, we as a whole need to control when we use our resources because some of them are not renewable. Especially some of the products we need every day to use in our everyday lives, such as gasoline, oil, coal, etc. In conclusion, we need to remember that everything is not endless in this world. I want to be able to use the resources that are always going to be renewable in my lifetime. It would ruin mostly all of the world because we need
gasoline every day to get to our jobs and to pick up children. We as people need to be more conservative with our resources because they will not last forever.

I would like to be able to give kids and adults with special needs more opportunities in their lives. Such as more equipment to help them with their particular disabilities. Try to give them more emotional support to keep them going. It all depends on what kind of disability they have. To see if it is curable or not. In conclusion, I want to try and help everyone one I can make lives better so it is enjoyable.

I want the future to not be so fast-paced. Everyone forgets about spending time with their families and has no time to do anything else because they are so caught up in technology. Families need to be more involved with their children and have family dinners to see what is going on in their daily basis.

In conclusion, I want families to stay together and to do activities with them and not always be on electronics. I want to be able to help everyone that is in need. This world is so fast paced now it just needs to slow down and go back to always being with family. Electronics are trying to take over but the people need to be in control of what they are doing. Using an electronic is an addiction now and it needs to cut down.
